EXECUTIVE SUMMARY

I am a data analyst with strong skills in data management, data structuring, and data warehousing. I have hands-on experience with data warehouse schemas, designing and understanding data models, and ensuring data quality for analysis. I focus on turning raw data into useful insights based on real business questions. This helps teams make decisions based on data. My experience includes working with ETL processes, data cleaning, and building analytical solutions that meet business needs.

I know T-SQL, Excel, Power BI, SSIS, and Python. I also have experience with both relational and NoSQL databases, including MongoDB. Additionally, I understand machine learning and web scraping techniques.

I am passionate about using data to solve real-world problems and always seek to improve my analytical and technical skills.

PROFESSIONAL SKILLS AND INTERESTS

Technical Skills:

- SQL
- Microsoft Power BI
- SSIS
- Oracle
- Data Warehousing
- ETL Process
- Feature Engineering
- Machine Learning
- Microsoft Excel
- Data Cleaning
- Data Modeling
- Data Visualization
- Data Structure
- Algorithm
- Statistics
- Web Scraping

Soft Skills:

- Presentation Skills
- Communication
- Teamwork
- Team Leadership
- Problem Solving
- Time Management

EXPERIENCE

Data Analysis Instructor (Volunteer) | *Pixels Egypt Org* | Sep/2025 – Present

Served as a volunteer Data Analysis Instructor at Pixels Egypt Org. I delivered training on databases, SQL, and Power BI (Power Query). I explained key concepts like data structures, data modeling, and data warehousing in a practical way. I taught SQL for analysis, covering topics such as joins, aggregations, filtering, and data extraction. This experience helped students gain business-driven insights. It also improved my presentation and communication skills through interactive sessions.

EDUCATION

Computers and Artificial Intelligence | *Helwan University* | Oct/2022 – Jul/2026

- GPA: 3.66 / 4

- Department: Information System

RELEVANT PROJECTS

CUCAS FU Scholarships

Developed an end-to-end data analysis system to address the lack of a centralized platform for scholarship information and improve the fairness and efficiency of scholarship distribution. The project focused on analyzing scholarship opportunities, applicant data, and financial aid to uncover gaps, trends, and decision-making insights.

Collected data through web scraping, then performed data cleaning and transformation, and designed a data warehouse using a star schema with multi-layer architecture (Bronze, Silver, Gold). Conducted exploratory data analysis and feature engineering, and built machine learning models (XGBoost, Random Forest) for prediction, classification, and clustering.

Built interactive Power BI dashboards with dynamic parameters to visualize key metrics and support decision-makers in optimizing scholarship allocation and identifying high-impact opportunities.

Graduation Project – Fari2y | AI-Powered Team Formation & Skill Intelligence System

Designed a data-driven system that optimizes team formation and task distribution based on skill analysis and performance insights. Built a scalable architecture with a dedicated analytics layer for advanced data processing and reporting.

Leveraged GitHub data extraction to analyze coding styles and infer real skills, and applied machine learning (text-to-text models) to convert unstructured project data into structured skill representations. Enabled accurate matching, performance tracking, and intelligent recommendations to improve collaboration and ensure fair evaluation.

E-learning Platform Analysis

Analyzed an online learning ecosystem to uncover insights about students, courses, and instructors. Built a structured database with SQL (triggers, stored procedures, views), performed data cleaning and exploration analysis, and applied Python for statistical insights. Designed interactive Power BI dashboards to visualize enrollment trends, course performance, and feedback, delivering actionable recommendations to improve engagement, revenue, and course quality.

COURSES

Digital Egypt Pioneers Initiative | | Jun/2025 – Dec/2025

I am currently enrolled in a practical, hands-on course focused on data analysis using Python, statistical techniques, and business intelligence tools. Gaining skills in Python with essential libraries, applying statistical analysis to uncover insights, and practicing SQL for data extraction and analysis. I work with Microsoft Excel for data cleaning and pivot reporting. Designing dashboards with Power BI and Tableau to communicate business insights. Exploring Engineering Prompting to enhance analytical thinking with AI tools. Developing soft skills such as teamwork, communication, and time management. Attending freelancing workshops to learn how to build an online career.

Information Technology Institute | | Nov/2024 – Sep/2025

Completed a comprehensive BI Development training program that integrated technical and analytical skills using various tools and platforms. Gained strong proficiency in SQL and advanced SQL for complex data querying. Applied Data Warehousing (DWH) concepts and implemented ETL processes using SSIS. Used statistical techniques to support data driven decisions. Leveraged Microsoft Excel for advanced cleaning and reporting. Designed dashboards using Power BI and Tableau and built SSRS reports for operational and analytical needs. Worked with SSAS to develop multidimensional and tabular models. Participated in projects simulating real-world business pipelines.

MEC Academy | | Aug/2024 – Jul/2025

Completed hands-on training in data analysis using Python, statistics, and BI tools. I acquired solid skills in Python for data manipulation, applied statistical methods to interpret data trends, and used SQL to query relational databases. Utilized Excel for data cleaning and reporting and created dashboards in Power BI. Completed end-to-end projects involving data collection, analysis, visualization, and reporting.
